Run Your Entire Business — Invoices, Expenses, Team & Analytics — From One Dashboard. No Spreadsheets. No Data Leaks. Made for Tunisia.

THE PROBLEM

Tunisian SMBs bleed time and money on fragmented tools

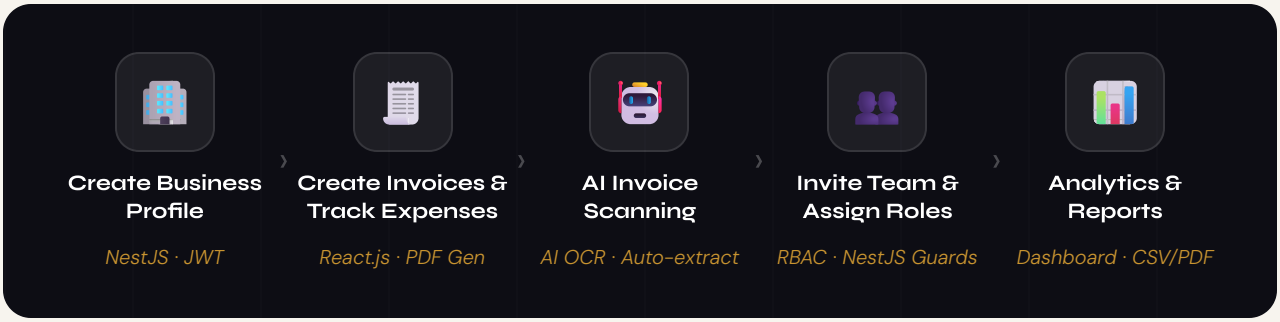

Business owners in Tunisia juggle **3–5 separate tools** for invoicing, expenses, client tracking, and reporting — causing **data silos, costly errors, and up to 25% revenue leakage** from untracked invoices. Existing solutions (Swiver, Axeane) suffer from **outdated UIs and steep pricing.** Global tools (QuickBooks) violate Tunisian **data sovereignty law.** Every month without a solution means lost money, wasted hours, and legal risk.

WHY WE'RE DIFFERENT

The only modern SaaS built for the Tunisian market — legally & technically

BizFlow combines a **modern React.js SPA**, a robust NestJS backend, and a MySQL database — all hosted on **Tunisian servers** for full data sovereignty compliance. It adds what no local tool offers: **AI-powered invoice scanning** (automatic data extraction), **real-time analytics dashboards,** and **role-based multi-user collaboration** — at a price Tunisian SMBs can actually afford.

THE SOLUTION — HOW BIZFLOW WORKS

BizFlow is a full-stack multitenant SaaS — each business gets its own isolated workspace. Admins, Accountants, and Team Members each see only what their role allows, all secured by **JWT authentication + bcrypt + RBAC guards in NestJS.**

THREE KEY BENEFITS

-70%

Admin Time Saved

Automated invoice creation, PDF generation, and email delivery eliminate manual financial admin.

100%

Data Sovereignty Compliant

All data stored on Tunisian servers — full compliance with national data protection law, out of the box.

×5

More Affordable

At least 5× cheaper than global alternatives, with AI features no Tunisian local tool currently offers.

EVIDENCE

A 2023 market analysis confirms **no existing Tunisian solution** combines modern tech, AI automation, and data sovereignty compliance. Swiver has outdated UI & high pricing. Axeane is too complex for SMEs. QuickBooks has **no Tunisian tax compliance.** BizFlow closes every identified gap simultaneously.

FUTURE OUTLOOK

After 6 sprints (12 weeks), BizFlow ships production-ready. **Phase 2** adds advanced AI cash-flow forecasting and mobile support. Long-term: BizFlow becomes the **financial infrastructure layer** connecting Tunisian SMBs, accountants, and regulators — driving Tunisia's digital economic transformation.

TECH STACK

Frontend: React.js + TypeScript
Backend: NestJS + TypeScript
Database: MySQL (TN servers)
Auth: JWT + Bcrypt + RBAC
DevOps: Docker · Kubernetes · SonarQube · GitHub Actions

CALL TO ACTION

It's time to rethink how Tunisian businesses manage their money.
